PROJECTS

Bi-Bike   *is not one of my best projects as it is a single page application built with React Library. Used Firebase, Bootstrap, heroku, JWT token, plain Javascript etc.*

Github repository & Live links : Client-side | Server side | Live Link

Technologies: Html, Css, Bootstrap, React Library, Mongodb, Github, React-Router, Firebase, Express.

Website Features:

> Secured by **JWT** token and a fully functional full-stack web-app

> Users can order products,leave reviews, manage all of his/her orders after login/signIn with gmail and password.

> New products can be added through the admin portal to the explore tab.

Vanilla JS Projects

Weather-App: Live link | Github Repository (Created with plain HTML, CSS,Javascript, Weather-api)

Features

>User can get knowledge about current weather condition just inserting their location

>All shown results are accurate

>Weather condition will also shown through cloud/sun and temperature

Macbook-Cart: Live link | Github Repository(Created with plain html,css,js)

Features

>User could order macbook depending on their preferences

>Get additional specs by choosing through button click

>Products can be choosed with basic features or additional features
